Jalal Grini

AI & Digital Transformation Engineering Student

jalal.grini@etu.uae.ac.ma Meknes, Morocco
JalalGrini jalal-grini

PROFILE

Final-year AI & Digital Transformation Engineering student specializing in Machine Learning, MLOps, and full-stack software architecture. Experienced in designing and delivering end-to-end AI applications, from Deep Learning models and Knowledge Graphs to scalable AWS deployment pipelines and enterprise backends, with a strong focus on clean architecture and automation.

EDUCATION

ENSA Al Hoceima (ENSAH) Al Hoceima, Morocco
Engineering Degree - Digital Transformation and Artificial Intelligence *2024 – 2027 (Expected)*

ENSA Al Hoceima (ENSAH) Al Hoceima, Morocco
Integrated Preparatory Cycle (Mathematics & Physics) *2022 – 2024*

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer Intern Summer 2026
Groupe 3RB Extreme *Temara, Morocco*

- Engineered a centralized financial operations platform for a 4-company holding group using Django REST and Next.js.
- Built a scalable architecture to support future AI integration, including RAG assistants and OCR invoice processing.
- Implemented JWT RBAC, comprehensive audit logging, and automated report engines with a strict TypeScript frontend.
- Containerized the complete system with Docker/Nginx and backed the API with 200+ automated tests.

Software & Automation Engineer Intern July 2025
Comptapilot (Accounting Agency) *Erfoud, Morocco*

- Developed a Streamlit data platform to manage client records and dynamically track recurring tax deadlines.
- Automated notification workflows via GitHub Actions, replacing manual tracking with scheduled daily scripts.

KEY PROJECTS

Sentinel (Cloud-Native MLOps Platform) *vLLM, MLflow, AWS, Terraform*

- Co-developing an autonomous platform to manage the complete AI model lifecycle on AWS infrastructure.
- Leading LLMOps and FinOps integration: optimizing vLLM inference on GPUs and monitoring infrastructure costs.

ORION (Multimodal AI System) *Neo4j, PyTorch Geometric, GNN, RAG*

- Piloting the Knowledge Graph axis for an explainable, autonomous AI decision platform.
- Implementing Graph RAG systems and Graph Neural Networks (GNN) for advanced contextual retrieval.

PFE Assignment Platform *Java, Spring Boot, PostgreSQL, React*

- Built a web application automating graduation project assignments, utilizing Excel data processing and constraint optimization.

RAG Document Assistant *Python, LangChain, React, LLMs*

- Developed a Retrieval-Augmented Generation system allowing users to query unstructured documents in natural language.

TECHNICAL SKILLS

AI & Data: PyTorch, TensorFlow, scikit-learn, Pandas, GNN, RAG, LangChain, LLMOps, Deep Learning
Backend & Web: Python, Java, Spring Boot, Django, FastAPI, Next.js, React, REST APIs, TypeScript
Cloud & MLOps: Docker, MLflow, AWS, Terraform, GitHub Actions (CI/CD), Nginx, Linux
Databases: PostgreSQL, MySQL, Neo4j, MongoDB, Data Modeling
Languages: Arabic (Native), French (Fluent), English (Professional Working Proficiency)
